

Alex Road Service Platform Scope

Project Overview

We will build **one unified website** for **Alex Road Service** that serves two purposes:

1. **Public-facing marketing/business website**
2. **Private operations platform** accessed through a **Login** button on the website

The public website will promote the business, generate leads, and provide customer contact options.

The private operations platform will support internal shop management for estimates, invoices, payments, work orders, customers, fleet records, inventory, and service history.

We currently have access to:

- **Firebase**
 - **Google Cloud Console**
 - **Google Apps Script**
-

Product Structure

1. Public-Facing Marketing / Business Website

This will be the main company website for Alex Road Service.

Purpose

- Present the company professionally online
- Explain services
- Capture leads and service requests
- Improve local search visibility
- Allow staff to access the internal operations platform through a Login button

Core Website Pages

- Home

- About
- Services
- Roadside / Emergency Repair
- Commercial Truck Repair
- Contact / Request Service
- Reviews / Testimonials
- Financing or Payment Request page
- Login entry point to operations platform

Website Features

- Mobile responsive design
 - Professional branding and layout
 - Clear call-to-action buttons
 - Click-to-call phone buttons
 - Google Maps integration
 - Contact and quote request forms
 - SEO for local truck repair and roadside service searches
 - Fast load speeds and clean navigation
-

2. Internal Operations Platform

This will be a secure web-based application accessed through the website login.

Purpose

Help Alex Road Service manage day-to-day shop and roadside operations, including:

- customer records
 - truck and fleet records
 - work orders
 - labor tracking
 - estimates
 - invoices
 - payments
 - parts and inventory
 - service history
 - technician updates
 - reporting
-

Phase 1 Deliverables

Phase 1 Includes

- Public marketing/business website
- Responsive web-based operations platform
- Mobile-friendly technician dashboard inside the web app

This means the internal app will work on:

- desktop
 - tablet
 - mobile browser
-

Detailed Feature Scope

A. Marketing Website Features

Required Pages

- **Home**
 - business overview
 - main CTA buttons
 - service highlights
 - trust-building content
- **About**
 - company background
 - team/company values
 - service area
- **Services**
 - overview of all repair services
 - diesel/truck/trailer repair offerings
- **Emergency Roadside Page**
 - emergency roadside support details
 - fast contact options
 - call-now button
- **Commercial Truck Repair Page**
 - shop repair services
 - fleet maintenance support

- service details for business customers
- **Contact / Request Service**
 - form submission
 - phone number
 - email
 - location/map
- **Reviews / Testimonials**
 - customer feedback
 - trust and credibility section
- **Financing or Payment Request Page**
 - financing info if offered
 - payment access if needed

Website Functional Features

- Mobile optimization
 - Local SEO setup
 - Google Maps integration
 - Click-to-call functionality
 - Contact and quote request forms
 - Login button for internal operations platform
-

B. Operations Platform Features

1. Authentication and Access

- Secure login
- Role-based access control
- Admin/staff/technician access levels

2. Dashboard

- Summary of open work orders
- Recent estimates and invoices
- Technician activity/status
- Key business metrics
- Alerts/reminders

3. Customer Management

- Customer accounts
- Company and individual customer profiles

- Contact details
- Notes and attachments
- Customer history

4. Fleet and Truck Records

- Fleet/customer truck records
- Unit numbers
- VIN
- Make/model/year
- Mileage
- Truck-specific service history
- Recurring maintenance tracking

5. Work Orders

- Create and manage work orders
- Assign technician(s)
- Status tracking
- Labor and parts association
- Notes and job updates
- Photo upload for repairs
- Attachments and supporting files

6. Labor Tracking

- Labor hours per work order
- Hourly labor rate
- Total labor cost calculation
- Technician time tracking
- Rate/hour visibility for estimating and invoicing

7. Estimates

- Create estimates
- Send estimates to customers
- Track approval status
- Convert estimate into invoice/work order

8. Invoices

- Create invoices
- Convert completed work into invoice
- Include labor, parts, taxes, and totals

- Send invoice by email
- Track paid/unpaid status

9. Payments

- Online payment links
- Card payment support
- Payment status tracking
- Payment history per customer/invoice

10. Parts and Inventory

- Parts catalog
- Inventory quantity tracking
- Parts usage per job
- Low stock visibility
- Record incoming/restocked parts
- Part cost and price tracking

11. Service History

- Full service history by customer
- Full service history by truck/unit
- Searchable maintenance records
- Track prior oil changes, part replacements, and repairs

12. Maintenance Reminders

- Oil change reminders
- Recurring maintenance reminders
- Service interval tracking by truck/unit

13. Technician Workflow

- Technician dashboard
- Mobile-friendly work order updates
- Job status changes
- Notes and repair progress
- Upload repair photos
- Track job completion status

14. Reporting Dashboard

- Revenue overview

- Open vs completed jobs
 - Labor totals
 - Invoice totals
 - Payment tracking
 - Inventory usage
 - Service activity summaries
-

Integrations

Payment Integrations

- **Stripe** or **Square** for payment processing

Accounting Integration

- **QuickBooks** integration later if needed

Messaging / Notifications

- **Twilio** later for SMS updates and reminders

Email

- Email invoice sending
- Estimate sending
- General notification emails

Storage

- Cloud file/image storage for:
 - repair photos
 - attachments
 - documents
-

Recommended Technical Stack

Frontend

- Marketing site + app interface built as a modern responsive web platform

Backend / Services

- **Firebase** for:
 - authentication
 - database
 - storage
 - hosting if needed

Google Cloud / Google Console

- domain setup
- analytics
- SEO tools
- email/domain services if needed
- cloud functions or related services if needed

Google Apps Script

Can be used for:

- automated emails
 - simple admin workflows
 - document generation support
 - reporting/export automations where helpful
-

Suggested Build Structure

One Domain

Example:

- alexroadservice.com → public website
- login button routes users into secure operations platform

User Experience Flow

1. Public user lands on marketing website
 2. Public user browses services, contact pages, and request forms
 3. Staff clicks **Login**
 4. Staff enters internal operations platform
 5. Staff manages customers, trucks, work orders, estimates, invoices, payments, and inventory
-

Scope Summary

Product 1

Marketing / Business Website

- branded public website
- service pages
- lead/contact forms
- SEO and mobile responsiveness
- login access to platform

Product 2

Operations Platform

- internal responsive web app
- secure login
- customer and fleet management
- estimates and invoices
- payments
- work orders
- labor tracking
- inventory
- service history
- reminders
- technician dashboard

- reporting
-

Notes for Development

- Build as a **single ecosystem** with one public website and one secure internal portal
- Prioritize **Phase 1 MVP**
- Keep the operations platform **mobile-friendly** instead of building a separate native app initially
- Structure platform so future integrations like QuickBooks and Twilio can be added later
- Use Firebase as the main backend foundation wherever possible to reduce development overhead and speed up deployment
